

1. Mark the Slate
2. Wear Safety Gear
3. Cut

WHAT YOU NEED:

- Angle grinder
- Safety glasses, ear protection, dust mask

1. Mark the Slate

Draw a marking where you want to cut the slate tile.

2. Wear Safety Gear

Since an angle grinder is a noisy, dusty, and dangerous tool, it is important to use safety gear such as ear protection, a dust mask, and safety glasses.

3. Cut

Do not press too hard from the start, as this could chip the edge of the slate tile.
