WHAT YOU'LL NEED

[Slate stepping stones](#) →

- Spade
- Sand/gravel with a fraction size of 0-8 mm
- Rubber mallet (optional - body weight can be used instead)

1. Choose the size

Our stepping stones are frost-resistant, slip-resistant, and locally sourced, with a classic look that harmonizes with our natural surroundings.

We offer stepping stones in four standard sizes, but if you'd prefer a custom size, our stonecutters can craft it just for you!

2. Find the desired placement

Lay the stepping stones on the grass in the spots where you want them placed.

Take a test walk to ensure they are spaced comfortably.

3. Remove grass/turf

Cut out the turf around the stone using a spade.

Lift away the stone and roll off the turf. Also, remove some of the soil until you have a hole that is a couple of centimeters deeper than the thickness of the stone, allowing space for a layer of stabilizing sand/gravel as well.

4. Add sand/gravel

To ensure that the stone stays level and stable over time, add a layer of sand/gravel as a base.

A layer of 2 – 3 cm is enough, and sand/gravel with a grain size of 0 – 8 mm is perfect. Smooth out the layer so that it is evenly distributed.

5. Place the stone

Put the stone in place and tap it down into the base with a rubber mallet. Jumping on the stone works just as well and is a bit more fun!
