

1. Application
2. Wait Time and Removal

YOU WILL NEED

- Akemi Graffiti Remover
- Painting brush
- Natural bristle scrub brush

1. Application

The surface must be dry. The optimal temperature is 10–30°C, and avoid direct sunlight.

Apply the product evenly with a brush.

2. Wait Time and Removal

After about 10–15 minutes, the paint will be softened enough to wash off with warm water.

For heavier contamination, it may be necessary to repeat the treatment. In this case, apply the product thoroughly with a natural-bristle scrub brush, and rinse off after sufficient soaking time.
